Required papers and book

For the independent literature and proof review of the coupled exponential moment manuscript. This document is a list, not the papers themselves. Please provide the full published PDF when available; an author manuscript or preprint is useful if not.

A. Main papers

1. Heat equation with memory: Lack of controllability to rest
Ivanov and Pandolfi (2009)
DOI: 10.1016/j.jmaa.2009.01.008
Highest priority: original full proof.

2. Exact controllability theorems for linear parabolic equations in one space dimension
Fattorini and Russell (1971)
DOI: 10.1007/BF00250466

3. Uniform bounds on biorthogonal functions for real exponentials with an application to the control theory of parabolic equations
Fattorini and Russell (1974)
DOI: 10.1090/qam/510972
Check Theorem 1.5 and all hypotheses.

4. Precise estimates for biorthogonal families under asymptotic gap conditions
Cannarsa, Martinez and Vancostenoble (2020)
DOI: 10.3934/dcdss.2020082
Published version requested; preprint already available.

5. Minimal time for the null controllability of parabolic systems: The effect of the condensation index of complex sequences
Ammar Khodja, Benabdallah, González-Burgos and de Teresa (2014)
DOI: 10.1016/j.jfa.2014.07.024

6. The Kalman condition for the boundary controllability of coupled parabolic systems. Bounds on biorthogonal families to complex matrix exponentials
Ammar-Khodja, Benabdallah, González-Burgos and de Teresa (2011)
DOI: 10.1016/j.matpur.2011.06.005

7. New blow-up rates for fast controls of Schrödinger and heat equations
Tenenbaum and Tucsnak (2007)
DOI: 10.1016/j.jde.2007.06.019

8. On the null-controllability of diffusion equations
Tenenbaum and Tucsnak (2011)
DOI: 10.1051/cocv/2010035

9. Approximate controllability and lack of controllability to zero of the heat equation with memory
Halanay and Pandolfi (2015)
DOI: 10.1016/j.jmaa.2014.12.021
Published version requested; preprint available.

10. Remarks on non controllability of the heat equation with memory
Guerrero and Imanuvilov (2013)
DOI: 10.1051/cocv/2012013
Original PDF has previously been inspected in part.

11. Müntz Type Theorems I
Almira (2007)
DOI: not verified.
Surveys in Approximation Theory 3, 152–194; arXiv:0710.3570. DOI not verified; preprint available.

B. Additional relevant papers

12. Sharp estimates for biorthogonal families to exponential functions associated to complex sequences without gap conditions
González-Burgos and Ouaili (2024)
DOI: 10.3934/eect.2023044
Additional: gap assumptions and generalizations.

13. A new relation between the condensation index of complex sequences and the null controllability of parabolic systems
Ammar Khodja, Benabdallah, González-Burgos and de Teresa (2013)
DOI: 10.1016/j.crma.2013.09.014
Additional comparison.

14. Lack of controllability of thermal systems with memory
Halanay and Pandolfi (2014)
DOI: 10.3934/eect.2014.3.485
Additional comparison.

C. Reference book

15. Observation and Control for Operator Semigroups
Tucsnak and Weiss (2009)
DOI: 10.1007/978-3-7643-8994-9
Book; ISBN 978-3-7643-8993-2. Relevant chapters are useful if the whole book is unavailable.

Suggested first batch: items 1–8, especially 1, 3, 4 and 5. A DOI link opens the publisher record and does not guarantee free access to the full paper.
